|  | By the end of Year 7 <br> students solve <br>  <br> subtraction of integers. They make connections between whole numbers and index notation and the relationship between perfect squares and square roots. | Investigate index notation and represent whole numbers as products and powers of prime numbers |  |  |  |  |
|  |  | Investigate and use square roots of perfect square numbers |  |  |  |  |
|  |  | Compare, order, add and subtract integers |  |  |  |  |
|  |  | Apply the associate, commutative and distributive laws to aid mental and written computation |  |  |  |  |
|  | By the end of Year <br> 7 students solve problems involving percentages and all four operations with fractions and decimals. | Compare fractions using equivalence. Locate and represent fractions as mixed numerals on a number line |  |  |  |  |
|  |  | Solve problems involving addition and subtraction of fractions, including those with unrelated denominators |  |  |  |  |
|  |  | Multiply and divide fractions and decimals using efficient written strategies and digital technologies |  |  |  |  |
|  | Students use fractions, decimals and percentages, and their equivalences. They express one quantity as a fraction or percentage of another. | Express one quantity as a fraction of another, with and without the use of digital technologies |  |  |  |  |
|  |  | Round decimals to a specified number of decimal places |  |  |  |  |
|  |  | Connect fractions, decimals and percentages and carry out simple conversations |  |  |  |  |
|  |  | Finds percentages of quantities and express one quantity as a percentage of another, with and without digital technologies |  |  |  |  |
|  |  | Recognise and solve problems involving simple ratios |  |  |  |  |
|  | By the end of Year 7 students compare the cost of items to make financial decisions | Investigate and calculate 'best buys', with and without digital technologies |  |  |  |  |
|  | By the end of Year 7 <br> students represent numbers using variables. They connect the laws and properties for numbers to algebra. <br> Students solve linear equations and evaluate algebraic expressions after numerical substitution. | Introduce the concept of variables as a way of representing number using letters |  |  |  |  |
|  |  | Create algebraic expressions and evaluate them by substituting a given value for each variable |  |  |  |  |
|  |  | Extend and apply the laws and properties of arithmetic terms and expressions |  |  |  |  |
|  | By the end of Year 7 students interpret simple linear representations and model authentic information <br> Students assign ordered pairs to given points on the Cartesian plane. | Given coordinates, plot points on the Cartesian plane, and find coordinates for a given point |  |  |  |  |
|  |  | Solve simple linear equations |  |  |  |  |
|  |  | Investigate, interpret and analyse graphs from authentic data |  |  |  |  |

| $\begin{aligned} & \text { ̈ㅡㄹ } \\ & \text { 픙 } \end{aligned}$ | By the end of Year 7 students determine the sample space simple experiments with equally likely outcomes and assign probabilities to those outcomes. | Construct sample spaces for single-step experiments with equally likely outcomes |  |  |  |  |
|  |  | Assign probabilities to the outcomes of events and determine probabilities for events |  |  |  |  |
|  | By the end of Year 7 students identify issues involving the collection of continuous data. They describe the relationship between the median and mean in data displays. | Identify and investigate issues involving continuous or large count data collected from primary and secondary sources |  |  |  |  |
|  |  | Construct and compare a range of data displays including stem-and-leaf plots and dot plots |  |  |  |  |
|  | Students calculate mean, mode, median and range for data sets. They construct and compare stem-andleaf plots and dotplots. | Calculate mean, median, mode and range for sets of data. Interpret these statistics in the context of data |  |  |  |  |
|  |  | Describe and interpret data displays and the relationship between the median and mean |  |  |  |  |

## Measurement \& Geometry

| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | By the end of Year 7 students use formulas for the area and perimeter of rectangles and calculate volumes of rectangular prisms. Students classify triangles as quadrilaterals. | Establish the formulas for areas of rectangles, triangles and parallelograms and use these in problem solving |  |  |  |  |
|  |  |  | Calculate volumes of rectangular prisms |  |  |  |  |
|  |  | By the end of Year 7 students describe different views of three-dimensional objects. | Draw different views of prisms and solids formed from combinations of prisms |  |  |  |  |
|  |  | By the end of Year 7 students represent transformations on the Cartesian plane. | Describe translations, reflections in an axis, and rotations of multiples of $90^{\circ}$ on the Cartesian plane using coordinates. Identify line and rotational symmetry. |  |  |  |  |
|  | $\begin{aligned} & \frac{y}{m} \\ & \frac{10}{4} \end{aligned}$ | By the end of Year 7 students solve simple numerical problems involving angles formed by a transversal crossing two parallel lines. | Classify triangles according to their side and angle properties and describe quadrilaterals |  |  |  |  |
|  |  |  | Demonstrate that the sum of a triangle is $180^{\circ}$ and use this to find the angle sum of a quadrilateral |  |  |  |  |
|  |  | Students name the types of angles formed by a transversal crossing a parallel line. | Identify corresponding, alternative and cointerior angles when two parallel straight lines are crossed by a transversal |  |  |  |  |
|  |  |  | Investigate conditions for two lines to be parallel and solve simple numerical problems using reasoning |  |  |  |  |
